Summary

I like working on challenging projects that no one has done before, usually involving the quick absorption of new information and synthesizing that into creative, effective, and cost-efficient solutions. Knowing a system from top to bottom and being able to leverage that knowledge to improve it is my best skillset. I also enjoy mentoring people and fostering their talents.

Specialties: Engineering Leadership, Product Development, Cloud Computing, Chaos Engineering, Distributed Systems, Virtualization, Unix/Linux Administration, Security, General Technical Operations, Web Development, Scalable/Reliable Systems, Web Architectures, Web Services, Systems Management

Experience

Principal Engineer

Amazon

Apr 2022 - Present (1 year 3 months)

Architect paired with a Director for the Alexa Operational Excellence team to make her faster, more reliable, more accurate, and more efficient, and improve overall customer experience. A combination of DevOps and MLOps. Currently solving the problem, "How do you measure the accuracy of a stochastic AI system?". Part of the primary contact team between AWS and Alexa. Designed and shepherded observability tools for a real-time, reactive system, reducing Alexa latency by 12% annually. Filed two speech-processing related patents.

CEO and Founder

MinOps

May 2016 - Apr 2022 (6 years)

We made a SQL interface to manage your cloud. Shut down the company after two open source programs dropped doing the same thing. It's hard to compete with free!

Chief Product Officer and Cofounder

CloudNative

Jun 2015 - May 2016 (1 year)

We ran your cloud infrastructure so you didn't have to. Made CI/CD tools and did consulting. Successfully exited.

Distributed Data Systems Architect

Netflix

Jan 2014 - Feb 2015 (1 year 2 months)

We joke that we are a logging company that plays movies, my job is to make that truer. Answer the question "How do we collect and store our data to make it easiest for our Engineers to produce, utilize and consume?" Make data a 1st class citizen at Netflix. Hone the data story from the beginning of the

pipeline to the end. Align our data story throughout the company. Create and evangelize data best practices. Discover and disseminate data patterns and anti-patterns. Curate the Netflix Data Platform

Founding Site Reliability Engineer (SRE)

Netflix

Jul 2011 - Apr 2014 (2 years 10 months)

Design systems to scale and deliver a great experience, and make sure that when someone wants to play a movie on Netflix, they can.

Founding member of Netflix's first SRE team. Primary technical contact between AWS and Netflix. Created the role of Chaos Engineer.

Work throughout the company evangelizing best practices for reliability and resilient architecture. Be the call leader for major outages driving a quick resolution and alleviating customer impact as quickly as possible. Write tools (generally in Python) to improve reliability and information flow throughout the company. Help with hiring and recruiting. During my tenure the team grew to 11 members and reliability increased by an order of magnitude.

Mentor/Advisor

Year One Labs

Jul 2010 - Jul 2012 (2 years 1 month)

Advisor to member startups; provide domain knowledge and expertise in the areas of operations and scaling as well as product and social media marketing.

First Engineering Hire/Founding DevOps Engineer/Interim CTO

Reddit, Inc.

Mar 2007 - Jun 2011 (4 years 4 months)

Moved reddit from the datacenter to the cloud. We were the first major website hosted fully on AWS. I was the primary technical contact between AWS and reddit. Managed the entire engineering team after the departure of the founders and other founding engineers, and grew the engineering team 3x in that time.

Responsible for all technology including system architecture, hiring, managing all engineers, capacity planning, budgeting, operations, vendor relations, and keeping costs down by maximizing automation while minimizing infrastructure. Involved in the design and testing of all major site features, marketing, determining new product directions and ideas, writing open source code, promotion, management of a 18M+ user community, and all other aspects of running reddit.com, an Alexa global top 100 website with one of the largest Pylons installations on the internet. Oversaw a 30X traffic growth.

Required to be an expert on how the system works end-to-end and learn and integrate new technologies quickly. Represent reddit at major conferences as an expert in virtualized environments (aka Cloud Computing) and rapid website scaling.

Senior Systems Engineer

eBay

Jul 2006 - May 2007 (11 months)

Assist the product development team by maintaining their test lab and performing product evaluations to certify products for inclusion in the eBay platform. Primary focus was Solaris/Unix administration and network configuration. Also administering IBM Bladecenters, Netscalers, F5's, XServ Raids and myriad other specialty hardware.

Security Engineer

eBay

Jul 2003 - Jul 2006 (3 years 1 month)

Developing fraud detection and prevention software; investigating computer crime; developing investigation tools; and serving as a security consultant for the entire organization as well as customers.

Developing, deploying and maintaining eBay Inc.'s IDS's and log aggregation in order to protect eBay customer data. Granted multiple security related patents for this work.

System/Network Administrator

Dec 1999 - Aug 2001 (1 year 9 months)

All around network/firewall/unix/windows admin.

Special Projects Coordinator

University of California, Berkeley

Aug 1996 - Nov 1999 (3 years 4 months)

Developing timelines and executing on special projects as necessary. Major project was coordinating and setting up the technical aspects of running the student elections, enabling 20,000 students to vote for class officers.

Education

University of California, Berkeley

BA, Cognitive Science, Creative Writing

2002 - 2003

Studied Cognitive Science and Creative Writing

University of California, Berkeley

BA, Cognitive Science

1996 - 1999

Studied Cognitive Science and Creative Writing

UCLA

N/A, N/A

1994 - 1994

Summer Quarter

California State University, Los Angeles

N/A, N/A

1989 - 1993

Summer quarters

Licenses & Certifications

 **Solaris 8 Certified Administrator** - Sun Microsystems

Issued Jun 2000 - Expires Jun 2002

Skills

Reliability • Virtualization • Social Media • Cloud Computing • Security • Linux • Web Services •
Web Development • Elastic Snapping • Networking

Honors & Awards

AWS Community Hero - Amazon Web Services

Sep 2014

AWS Community Heroes is a program designed to recognize and honor the most engaged developers who've had a real impact within the community

<https://aws.amazon.com/heroes/>

Star of CNN's "hacker" B-Roll - CNN

Jun 2011

My name has appeared in numerous CNN stories as a background image for hackers, geeks, nerds (and occasionally terrorists).

Emmy Award - Academy of Television Arts & Sciences

Oct 2014

Emmy Award - Academy of Television Arts & Sciences

Oct 2013

Emmy Award - Academy of Television Arts & Sciences

Oct 2012

Guinness World Record - Guinness World Records

Dec 2013

Participated in the largest online Secret Santa game, which consisted of 89,421 participants, organized by redditgifts.com.

Guinness World Record - Guinness World Records

Dec 2012

Participated in the largest online Secret Santa game, which consisted of 44,805 participants, organized by redditgifts.com.

Guinness World Record - Guinness World Records

Dec 2011

Participated in the largest online Secret Santa game, which consisted of 30,250 participants, organized by redditgifts.com.

AWS Machine Learning Hero - Amazon Web Services

Sep 2019

AWS Machine Learning Heroes is a program designed to recognize and honor the most engaged developers who've had a real impact within the Artificial Intelligence and Machine Learning communities on Amazon Web Services.
